

Dear Ed Zander

Chairman & CEO of Motorola

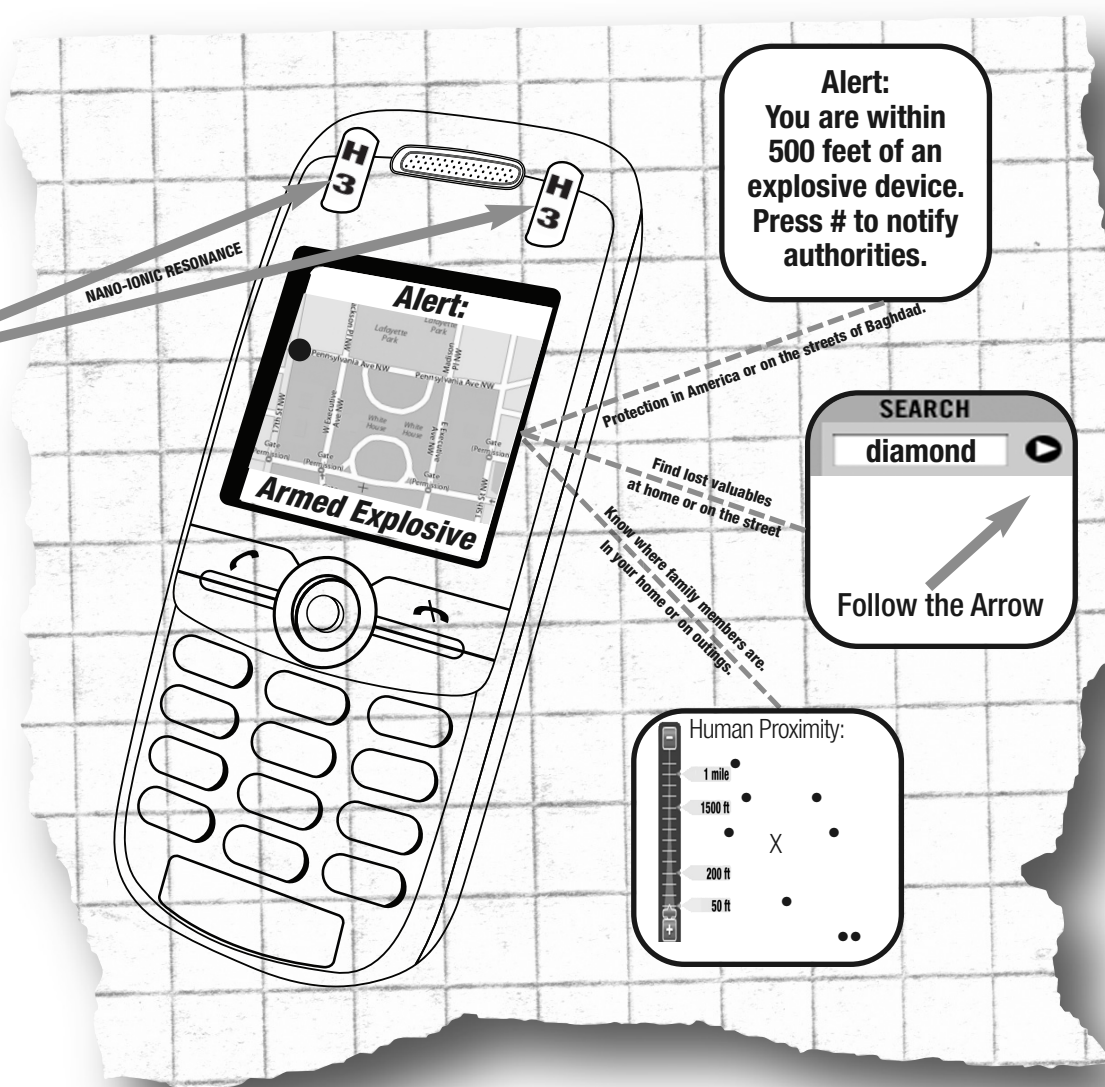

An exclusive to

the ultimate cell phone

“killer technology”

is yours for the asking.

“We believe this is the most important scientific breakthrough since the invention of the transistor.”

Mr. Zander, a friend of yours for thirty years convinced me to make this approach. He said you are a stand-up guy who I can trust completely. I have invented, built, and had independently tested a non-radio-wave technology—called nano-ionic resonance—that can detect any element, molecule, or sequential list of elements and molecules at great distances and through any shielding. ANY shielding. Given that it is only a matter of time before suicidal nut jobs start blowing themselves up in America—or worse, that some cream-of-the-crop nut job gets his hands on a nuke—cell phones equipped with H3 detection technology could be the difference between American freedom or an American police state.

Validation: The above claims have been independently validated by Chemir Analytical Labs. As additional validation, I offer my success in mineral exploration with Bill Lewis at Eagle Energy Corp.; Stephen Shaffer, an archeologist; and Darin Long and Dory Peters, Four Winds Exploration. The Intermountain Bomb Disposal Squad is currently using and testing H3 technology. Finally, to the left are our 2007 awards: the **Best of State** Inventor of the Year award and the **Utah Innovation** Chemical Materials award.

My offer to you: I will demonstrate H3 technology to you any time, any place. If we can come to an agreement within 30 days, Motorola will have an exclusive for H3-equipped cell phones. Forever. The reason I’m running this ad is not to embarrass you, but to make public request for some air cover, so to speak. We spectacularly demonstrated the H3 to the U.S. Army.* We believe this is the most important scientific breakthrough since the invention of the transistor. And I think they do, too. Our hand-held H3 units can be detecting IEDs and saving American lives in Afghanistan and Iraq within 90 days. I sincerely believe that you and Motorola can accelerate this process and spare many military families significant heartbreak.

If you and I cannot come to an agreement, I’ll have to consider other strategic partnerships 31 days from now. Please email me at chuck@h3tec.com or call my personal cell phone at 801-814-6577.

Looking forward to a high-bandwidth conversation, I remain

Sincerely yours,

Charles L. Christensen
